

Vista DataVision – Data Management Software

db.web.browser

db.web.browser gives web access to all the pages configured by db.data.browser and all the reports, including advanced reports. In the Pro version, web access may be set up with a Username and Password, so each Username account only has access to his own data. db.web.browser is perfect for Service Providers, to give clients access to their logged data.

Features

db.web.browser has many advanced built-in features perfect for web-based users.

- Displays Pages with 1 to 6 graphs.
- Each graph can display up to 6 variables from multiple stations.
- Display data with timestamp from 1 second and up
- Configure all views in any language.
- Select for display any time period from 1 hour to years.
- Scroll data for any time period from 1 hour to Year.
- View data as graph or as table.
- Download data from graphs into text files for use in other applications, including headers for columns.
- Enlarge any graph to full size.
- Reports such as sum, max, average and minimum are calculated instantly for any period of time.
- X-Y displays for any variables for any period of time.
- Polar Graph for any variable for any period of time.
- Wind Rose for wind directional data for any period of time.
- Histogram graph for any data for any period of time.
- Sort-by-size for any data for any period of time.

SYSTEM REQUIREMENTS

WEB Server: The default Web Server is the IIS Web Server that is part of the Windows Professional Operating Systems (XP Pro, 2000 Pro). To run db.web.browser, Win 2000 Pro or Win XP Pro are needed.
