SCai Data Acquisition System

GMS series

Features Applications

- Modular electronics for user repair and upgrade
- ☐ 3 or 6* channels, up to 2000 sps sampling rate
- $\hfill \Box$ Low noise individual 24-bit $\Delta \Sigma$ ADC per channel
- ☐ Internal built-in and/or external sensor options
- ☐ Wired, Wi-Fi*, GSM*, satellite* links
- Power-Over-Ethernet and wide power range
- Smart satellite* or network timing
- USB for storage and communication devices*
- Continuous data recording to ringbuffers
- ☐ Flexible configuration of multiple triggers
- ☐ Simultaneous data streaming to several clients
- Virtual signals from realtime processed sensor signal
- Rugged aluminium housing with easy installation
- ☐ Web Interface compatible with smartphones /
- ☐ Simple and secure remote access over Internet
- Alarm output with up to 4 dry-contact relays*
- ☐ Internal battery*, low power consumption
- ☐ Hot swappable SD card
- □ Third generation of NetQuakes Recorders

With its optimized installation, operation and maintenance philosophy **scai** offers the real possibility to measure any dynamic motion with an abundance of features and options.

Highly reduced cost of ownership and user-friendly approach in the design make **scai** the perfect choice for the most advanced user.

Numerous optimisations within the architecture and the design yields unprecedented performance for seamless and fast execution of all system processes.

Fully compatible with existing GeoSIG sensors and can co-exist and co-perform in the same network as the GMS series recorders. The simple upgrade path makes the **scai** "future proof".

- Seismic and Earthquake Recorder
 - Structural Health Monitoring
- □ Real-time Seismology for Free-field and Urban Areas
- ☐ High Density Earthquake Monitoring Networks
- ☐ Shake / Hazard Mapping based on Instrumental Data
- ☐ Earthquake Early Warning and Rapid Response
- **□** Damage Estimation, Disaster Management
- Seismic Alarm and Safe Shutdown
- Ambient Vibration Testing (optionally fully wireless)
- ☐ Induced Vibration Monitoring and Notification
- Building Code Compliant Instrumentation

SPECIFICATIONS

SCai Data Acquisition System

An intuitive web interface is available for easy configuration and interaction as well as display of live data graphs and state of health information, using any web browser.

The device configuration file in XML format can be alternatively edited on site through the instrument console, exchanged by replacing the memory card, remotely from a server or through SSH.

Modular plug-in electronics structure provides highly increased serviceability and maintenance as well as easy hardware field upgrades or replacements.

Data Analysis

scai can perform realtime single/double integration, differentiation, HP/LP/BP filtering, decimation, peak/average calculations on the physical sensor signal and can provide these as realtime virtual signal. All recording and monitoring features can be applied on the virtual signals, simultaneous to the physical signals.

Sensor*

scai can include select GeoSIG sensors internally. In that case the model Internal: name changes accordingly and the sensor levelling is achieved via the three levelling screws of the single bolt mounted base plate of the scal

All GeoSIG sensors and any other third-party sensors with following

specifications can be connected to scal as external sensor(s): ± 20 V, ± 10 V, ± 2.5 V Sensor output: Differential:

Single ended*: 0 - 20 V, 0 - 10 V, 0 - 2.5 V Current loop*: 4 - 20 mA

15 or 24 VDC / 600 mA Power to sensor:

Digitizer

Channels: 3 or 6*

24 bit $\Delta {-} \Sigma$ converters individual for each channel A/D conversion:

DSP 32 bit output word length

Dynamic range:

146 dB per-bin @ 1 Hz rel. full-scale RMS Overall:

137 dB @ 50 sps peak-peak RMS to RMS shorted input noise

Wide-band:

0 - 500 Hz 118 dB RMS full-scale peak to RMS shorted input noise

ANSS

0.002 - 50 Hz 127 dB RMS full-scale peak to RMS shorted input noise 0.01 - 15 Hz 132 dB RMS full-scale peak to RMS shorted input noise 133 dB RMS full-scale peak to RMS shorted input noise 15 - 30 Hz

configurable up to 6 channels @ 2000 sps Sampling rate:

supports 2 different simultaneous sample rates each channel can have different sampling rates

0 to 1000 Hz Max. bandwidth*:

Analog and digital FIR (finite impulse response) Anti-Aliasing Filter:

Triggering

Several Trigger Sets can be defined in the instrument. Each set can be flexibly configured regarding the source of trigger, main and advanced trigger parameters, trigger processing and selected channels for storage. A voting logic based on the

Trigger Filter: Fully independent high-, low- or bandpass trigger filters can be

configured. Level:

User adjustable threshold. User adjustable STA / LTA values and STA/LTA trigger and de-STA/LTA:

trigger ratio

Scheduled / Manual: After start-up, at a given date/time, after event or

manual triggers

Early Warning (EEW)*: JMA Earthquake Early Warning

Event Recording

1 - 720 seconds, typical Pre-event memory: 1 - 7200 seconds, typical Post-event duration:

Event Summary and Parameters

PGA, PGV, PGD, SA (at 0.3, 1, 3 Hz) Transmission delay: User defined from trigger time

Ring Buffer

User can request an event from any period of the ring buffer by specifying the start time/date and the duration from the console Usage:

or remotely from a server

Method: Ringbuffer files with configurable duration which can be uploaded automatically to data server.

Data Stream

Protocol/Compatibility: GSBU, SeedLink, compatible to Earthworm

Storage Memory

8 GByte Removable SD Card, FAT32 or EXT4 formatted higher Size and Type

Intelligent management of memory card capacity using policies Management:

as per file type and ring buffer capacity specification.

miniSEED and extended miniSEED with information en-Recording format: capsulated into blockette 2000

Sampling rate [sps] x 0.4 [MB / day / 3 channel] **Estimated Capacity:**

(example: 40 MByte / day / 3 channel @ 100 sps)

typical, since the data is compressed, capacity depends on the

context of the data

Indicators

LED Indicators: RGB LEDs for Power, System, Data, Network and Sensor **Self Test**

Permanent self-monitoring of hardware and software components without affecting their normal operation

User-configurable periodical state of health (SOH) report based on comprehensive test of instrument, which can be requested at any time.

User-configurable periodical sensor test.

Advanced sensor testing with sine, saw and square wave injections.

Logging of temperature and humidity inside the unit.

Timing

Internal clock: Intelligent Adaptive Real Time Clock (IARTC)

Sources: Network Time Protocol (NTP),

GNSS (GPS, GLONASS, BeiDou and Galileo) with external antenna up to 5 m cable, or with external module up to 100 m

cable*, wired interconnection (ICC)*

Free running drift:

without any source: ±0.5 ppm @ constant +25 °C ±2.5 ppm @ -10 to +50 °C

after learn

(source disconnect): < ±0.5 ppm @ -10 to +50 °C

Accuracy:

Running free: calculate from above drift

Running with NTP: < ±0.5 ms Running with GPS or ICC: < ±0.001 ms

Power Supply

9 - 48 VDC Input voltage:

90 - 260 VAC / 50 - 60 Hz to 15 VDC switched UL approved

external power block

Power over Ethernet: Mode A and B

Power consumption: 130 mA @ 12 VDC for 3 channels

200 mA @ 12 VDC for 6 channels

Internal battery*: 7.2 Ah for > 24 h autonomy with intelligent charger, higher

autonomy is available with external batteries

Communication

Configuration,

Ethernet, Wi-Fi*, Serial line, Console, Data Retrieval:

Removable SD card, USB-storage*

Network requirements:

Fixed or Dynamic IP on Ethernet LAN and/or Internet connection with Ethernet interface or OpenVPN, upload to HTTPS and SFTP servers, Wi-Fi (b/g/n) network with WEP,

WPA, WPA2 security and Enterprise Mode* GeoDAS proprietary protocol over SSL, Checksum and software handshaking 2 ports (console and streaming)

115200 baud Serial Stream*: 38400, 57600, 115200 baud

Alarm and Notification⁵

Alarms:

Max voltage:

Security:

Serial ports:

Baud rates

3 independent or 4 common solid state relay contacts (user selectable) for trigger alarm and/or error; with "acknowledge input" support. This provides a seismic switch functionality.

SMS notification is available.

Alarm levels Configurable based on event triggers 1 to 60 seconds

Relay Hold-On: (User programmable)

The contacts are suitable for a low voltage control. In case a Capacity:

large load must be switched then external relays should be

125 V / 250 mA

Wired Interconnection (ICC)*

GeoSIG proprietary wired common time and common trigger interconnection network via special dedicated cable, distributing GPS-grade time precision among several units. Modem / WAN / LAN Interfaces*

External peripheral modules for cellular 3G/4G, SHDSL, Fibre optic, etc are available.

Environment / Reliability

Operational temperature: -20 to +70 °C▼ Storage temperature: -40 to +85 °C▼

0 to 100 % RH (non-condensing) Humidity MTBF: > 500'000 hours (based on GMS series)

Housing

Protection:

Easy Transport*:

Cast aluminium housing Type: Connectors: Metallic circular screwed, or MIL-style*

296 x 175 x 140 mm (W x D x H) Size: Size with base plate: 296 x 225 x 156 mm (W x D x H) Weight:

4.7 kg (optional < 4 kg*)
1.3 kg base plate, 0.3 kg internal sensor, 2.6 kg internal

battery, ask for other options* IP65(NEMA 4), IP67(NEMA 6)*

Mounting: Base plate with single bolt, surface mount. When base plate

levelled and fixed, scai can be replaced without re-levelling. Portability accessories are available to facilitate short term

measurements.

GMS series are produced in different types to suit particular specifications or regulations. Specifications mentioned in this datasheet may be different among different types.

★: optional

▼: use of an internal battery may degrade this specification

©: Retrieved data can be in the following formats depending on transmission, software and storage method used: miniSEED, DAT, ASCII, SEISAN, SUDS, SAC, SEG-2, Matlab, Artemis
